

# Cardinity module for OpenCart V1.4.9 to v2.x

# 1. Installation

Modules for different OpenCart versions are located in separate folders.

OpenCart version	Module folder name
1.4.9	oc149
from 1.5.0 to 1.5.1.2	oc150_1512
1.5.1.3.1	oc15131
from 1.5.2.0 to 1.5.6.4	oc1520_1564
2.x	oc2x

Select the folder corresponding your OpenCart version and upload folder content to the server.

Enter „User key“ and „User Secret“ . Set „Order status“ and „Geo Zone“ depending on your needs. Order status will be changed to the selected order status after payment will be confirmed.

If you would like Cardinity module to be enabled, set "Status" to "enabled".

To save the module configuration click „Save“ button.

## 2. Module translation

Module can be translated to any language you want. To make a translation, create the folder structure:

„admin/language/your\_language/payment“ – for admin translation;

„catalog/language/ypur\_language/payment“ – for frontend translations.

Copy „admin/language/english/payment/cardinity.php“ file to the created folder for admin translation.

Copy „catalog/language/english/payment/cardinity.php“ file to the created folder for frontend translation.

Rename copied file to „your\_language.php“. Edit your language.php using any text editor.

### 3. Templating

You can change frontend template for module to match your shop design.

Template files are located on the „*catalog\view\theme\default\template\payment*“ folder.

Copy „*cardinity*“ folder, „*cardinity\_fail.tpl*“, „*cardinity\_process.tpl*“ and „*cardinity.tpl*“ to your template folder.

„*cardinity.tpl*“ - used by OpenCart to confirm the order;

„*cardinity\_fail.tpl*“ – used to display errors that cannot be resolved;

„*cardinity\_process.tpl*“ – main module form.

**Important. Do not change form field and php variable names!**
